

## **Personal Injury/Accidents**

Often we take our physical and mental well being for granted - - until something goes wrong. When an accident happens a life can be forever changed. Simple pleasures become chores. Daily routines are disrupted. Economic losses are often devastating. Whether caused by an auto accident, a defective product, malpractice or other forms of negligence, injuries alter lives. The Firm takes responsibility for effective, aggressive investigation and representation, allowing the injured person to attend to health, family, and economic issues, while we pursue a variety of legal means to obtain the highest possible financial recovery.

The lawyers, paralegals, investigators, and staff of The Firm work as a team to pursue all available avenues. The Firm counters an insurance company's economic resources by putting its experience and proven techniques for maximizing recovery to work, including early investigation, careful review of medical records, assisting and directing clients to appropriate, supporting medical providers, and thoroughly evaluating economic and emotional losses.

Insurance companies have poisoned the public regarding injury claims by distorting statistics and highlighting a few outrageous verdicts among thousands of legitimate claims. The Firm strives to solidify our clients' cases to prove the true personal toll caused by imprudent, negligent conduct so that judges, juries and adjusters alike will understand the need to fully and fairly compensate our clients for all aspects of their losses.
